Creating Quizzler Quizzes

The first two lines of every quiz must begin with the #quizzler tag and the #name tag. You follow these two lines with some number of question/answer lines and other optional special tags that are described below.

Here is a very simple quiz text that you would type in Memo Pad:

```
#quizzler Forms and Uses of Energy
#name Energy
#author Judy Blume
#moreinfo Use this quiz to help you study for the Forms and
Uses of Energy Test at the end of December.

What is the energy of object in motion?
kinetic;potential;hyper;temperature

Which would have potential energy?
stretched rubber band;rolling ball;wind;light

A falling rock has what kind of energy?
potential & kinetic;potential;kinetic;chemical energy
```

<u>Tags</u>

#quizzler

Every quiz must begin with this tag on the first line. This is a marker that identifies this quiz as a Quizzler quiz. You can actually put anything you want after the tag, and doing so makes it easier to identify in a list of memos.

#name x

Every quiz must have this tag on the second line. "x" is the name of the quiz as seen by the PalmOS system after importing the text file, and is limited to 32 characters.

#author x

"x" is a string that will be displayed on screen with the other options when a quiz is selected. Usually this will contain the author's name and/or contact information. The string is limited to 63 characters.

#moreinfo

Use this tag to include more info about your quiz. In Quizzler 2.0, this extra info is available by tapping the "More" button on the Quiz Options screen. You might use this to include an explanation of your quiz, or a scoring table (like "5-10 correct = pretty smart"). The information you provide is limited to 255 characters.
